4 Product description

- This is version 1.13.0 of FEE42-TRAVEO™ II.
- This version supports MISRA C:2012 coding rule.

  This version supports the following plugins: Fee, Fls, Fls (For CM0+), Base, Make, and Resource.

- Actual available plugins will be restricted by the license key of installer, though this document explains all plugins. For more details on actual available plugins, see **Notes** section.
- The SW has not been tested with all possible configuration combination patterns, although each configuration parameter has been tested individually. You should verify the final configuration.
- The *arxml* files are not tested. These have been checked by the AUTOSAR module definition checker tool only.
- For TRAVEO™ II family of devices, Infineon follows a platform concept; thus, TRAVEO™ II devices are built from a subset of HW IPs which have been defined for the TRAVEO™ II platform. This approach creates maximum compatibility within the TRAVEO™ II platform. Based on this concept, the software has been tested on representative superset devices. Superset devices support all channels and all features available in subset devices. Therefore, all devices listed in **Supported derivatives** are equally supported by the software. The devices that have actually been tested are listed in the **Devices under test** section.
- Open source software (OSS) compliance report for TRAVEO™ II FEE was created using Protex software compliance management products and services from Black Duck Software. As per report result, no open source software has been detected in the TRAVEO™ II FEE.

15 Notes

Keep in mind the following points before you use this software release.

- Installable plugins depend on the license key type of the installer. There are two types of license keys of the installer as shown in the following table:

Installable plugins	**License key types of installer**	
	FEE	**FEE with Fls (For CM0+)**
FEE plugins (Fee, Fls, Base, Make, and Resource)	✓	✓
Fls (For CM0+)	-	✓

- In an EB tresos project, a combination of the modules that are contained in a different FEE package version is not allowed.
  For example, a combination of Fee in FEE package V1.x.x and Fls in FEE package V1.z.z is not allowed.
- In an EB tresos project, a combination of the Fls module and Fls (For CM0+) module is not allowed.
