Configuration Parameters

Included Containers

Container Name	Multiplicity	Scope / Dependency
MemMapGeneric Mapping	0..*	Defines which SwAddrMethod is implemented with which MemMapAddressingModeSet. The pragmas for the implementation of the MemorySelectorKeywords are taken from the MemMapAddressingModeStart and MemMapAddressingModeStop parameters of the MemMapAddressingModeSet for the individual alignments. That this mapping becomes valid requires matching MemMapSupportedSectionType's, MemMapSupportedSectionInitializationPolicy's and MemMapSupportedAddressingMethodOption's. The MemMapGenericMapping applies only if it is not overruled by an MemMapSectionSpecificMapping

Description: [SWS_COMTYPE_00029] [ComStack_Cfg.h shall be generated by the generator to generate the type definition of the PduLengthType and PduLengthType from the EcuC Virtual Layer based on the configuration e.g. typedef uint8 PduLengthType if number of PDUs are less than 256.] ()

Limitation: The type of PduLengthType that is defined in ComStack_Cfg.h is fixed to uint32. The type of PduLengthType that is defined in ComStack_Cfg.h is fixed to uint16.

T2MC-11789 - [SWS_MemMap_00028]Header file structure

Title: [SWS_MemMap_00028]Header file structure

Description: [SWS_MemMap_00028] [The Memory Mapping shall provide a BSW memory mapping header file if any of the BSW Module Descriptions is describing a DependencyOnArtifact as requiredArtifact.DependencyOnArtifact.category = MEMMAP In this case the file name of the BSW memory mapping header file name is defined by the attribute value requiredArtifact.DependencyOnArtifact.artifactDescriptor.shortLabel in the BSW Module Description.](SRS_BSW_00465, SRS_BSW_00415, SRS_BSW_00351, SRS_BSW_00464)

Limitation: Only fixed file name "{Mip}_MemMap.h" is provided because the BASE module does not support the configuration.

T2MC-11790 - [SWS_MemMap_00032]Header file structure

Title: [SWS_MemMap_00032]Header file structure

Description: [SWS_MemMap_00032] [For each basic software module description which is part of the input configuration a basic software module specific memory mapping header file {Mip}_MemMap.h shall be provided by the Memory Mapping if the BSW Module Descriptions is NOT describing a DependencyOnArtifact as requiredArtifact.DependencyOnArtifact.category = MEMMAP. Hereby {Mip} is composed according <Msn>[_<vi>_<ai>] for basic software modules where

- <Msn> is the shortName (case sensitive) of the BswModuleDescription
- <vi> is the vendorId of the BSW module
- <ai> is the vendorApiInfix of the BSW module

The sub part in squared brackets [_<vi>_<ai>] is omitted if no vendorApiInfix is defined for the Basic Software Module which indicates that it does not use multiple instantiation.](SRS_BSW_00465, SRS_BSW_00415, SRS_BSW_00351, SRS_BSW_00464)

Limitation: Only fixed file name "{Mip}_MemMap.h" is provided because the BASE module does not support the configuration.

8.1 Module SW-Version 1.2

Initial module setup.

8.2 Module SW-Version 1.3

T2MC-38111 - Base module in conflict with EB Base module

Title: Base module in conflict with EB Base module

Description: Base module delivered by Cypress is containing files in conflict with the Base module delivered by EB.

Cypress Base module follows these rules:

- Keep the standard files in Base module
- Move controller/compiler specific headers in Platform plugin

This could be achieved with moving files from CYT2 folder into Platform Cypress plugin.

8.3 Module SW-Version 1.4

T2MC-43523 - [CAN, BASE] CanObjectId does not correspond to a value of 256 or more

Title: [CAN, BASE] CanObjectId does not correspond to a value of 256 or more

Description: The RxHwHandle member of the Can_RxHandleMappingType table that stores CanObjectId is uint8.

When a value of 256 or more is entered, overflow occurs.

8.4 Module SW-Version 1.5

T2MC-55803 - Rename target CYT2 to MXS40

Title: Rename target CYT2 to MXS40

Description: The target name should be renamed from CYT2 to MXS40.
Target name MXS40 can be used as unified name for TraveoII family.

8.5 Module SW-Version 1.6

T2MC-59571 - [CAN, BASE] Can_HwHandleType supports both uint8 and uint16.

Title: [CAN, BASE] Can_HwHandleType supports both uint8 and uint16.

Description: Can_HwHandleType must support both uint8 and uint16.

Can_GeneralTypes.h is provided by the integrator and must be compatible with MCAL CAN and BSW CAN (CANIF, PDUR, etc.).

Following is supported in release V1.2.4.

T2MC-77594 - Support IAR Compiler

Title: Support IAR Compiler

Description: Support IAR Compiler (IAR EWARM FS 8.22.3.15992).

Following is supported in release V1.5.0.

T2MC-39519 - Support EB tresos V26.2.0

Title: Support EB tresos V26.2.0

Description: Support EB tresos V26.2.0

[Impact]

Strict AUTOSAR specification and check for parameter configuration errors are implemented in EB tresos V26.2.0.

In addition, handling of reference paths (relative paths) such as System Description file (ARXML) is changed in EB tresos V26.2.0.

Therefore, if the current ECUC Configuration Definitions XML file contains deviations or errors, you may find errors during import to tresos26. In that case, the ECUC Configuration Definitions XML file must be modified appropriately.

In addition, if the current ARXML file contains unresolvable paths, you may find errors during import to tresos26. In that case, ARXML file must be modified.

The SW has been tested in Cypress; no risks except for the low-level risk listed above were found.

T2MC-164778 - Support MISRA C:2012 coding rule

Title: Support MISRA C:2012 coding rule

Description: Support MISRA C:2012 coding rule.

The MISRA C:2012 coding rule checks the source code.

If a deviation from the rules is required, add the deviation comment to the code and report the result.

If a deviation is for MISRA-C:2004 only, remove the deviation comment.

8.7 Module SW-Version 1.8

T2MC-164831 - [ALL] Misleading comment in Module_MemMap.h

Title: [ALL] Misleading comment in Module_MemMap.h

Description: *{Mip}_MemMap.h* files are provided as sample template files. But, the file header comment cannot be modified, which is a contradiction. To resolve this contradiction, change the file header comment to allow user modification.

Also, to make sure that the file is not a part of the commercial product, move the *{Mip}_MemMap.h* files to the *MemMap* stub folder.
